EMOTIONAL ZOO · 1 MIN READ

A meltdown should never be the first sign.

A soft band that warns a parent minutes before an autistic child's meltdown, at home.

In short: in clinics, a wrist sensor predicted episodes 3 minutes ahead. Nobody has tested it at home.

Concept image, not a real photo.

THE PROBLEM

Parents find out too late.

A parent learns about a meltdown when it starts. The child often can't say what is wrong.

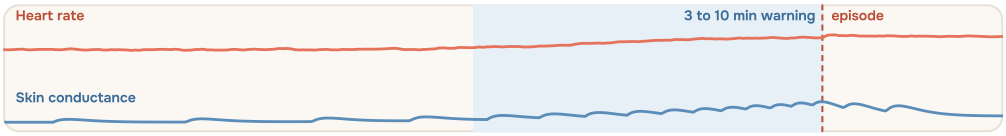

Hunting for triggers — 47%

Our tagging of 409 public parent posts. Source

THE SCIENCE

A sensor can see it coming.

In 4 hospitals, a wrist sensor predicted episodes **3 minutes** ahead. AUROC 0.80, 70 young people.

Imbiriba et al., JAMA Network Open, 2023 · 10 min: Kartha et al., 2026, preprint · curves are schematic

THE GAP

Nobody has tested it at home.

99 children in all published studies, all in clinics or classrooms. **Zero at home.**
